## Garden Bouquet

BLOOMS ALL SUMMER!

Cannas are (sub) tropical plants with large, broad leaves and yellow, orange, red or pink flowers ...

They make us reminisce about beautiful beaches, sultry nights, flower beds, sun, warmth and happiness.

The genus is native to Central and South America.

These summer-flowering plants grow to 1-2 meters high and have an extensive rhizome system (roots).

With their exuberant bloom, they are a showpiece in every garden or on every balcony.

The Canna indica, commonly known as Indian shot, African arrowroot or Sierra Leone arrowroot, is also used for weddings and symbolizes trust.

# Garden Bouquet

BLOOMS ALL SUMMER!

In Vietnam and China the plants are sometimes consumed. The roots of the canna are cooked for a long very time before they can be eaten.
